

Medical Care
Special
Services
(Infant/Child)

All children under 5 should be checked for lead exposure at regular intervals. High levels of lead may cause damage to children's brains and nervous systems, slower growth, and, possibly, coma and death.

For more information call Kent County Health Department at 632-7063. Physician/Clinician guidance is also available at www.michigan.gov/leadsafe.

Immunizations are available for children on Medicaid, MI Child, or those underinsured at all Kent County Health Department clinics. Call 632-7200 for information.
